

Upserve POS and GuestCenter by OpenTable are revolutionizing the entire guest experience by delivering the most comprehensive reservation and guest management tool available today.

### Elevated hospitality at your fingertips

Equip servers with pertinent guest details at the start of each shift, allowing them to tailor and enhance the guests' experience based on their reservation history and preferences. Managers can match their top servers with VIP guests.

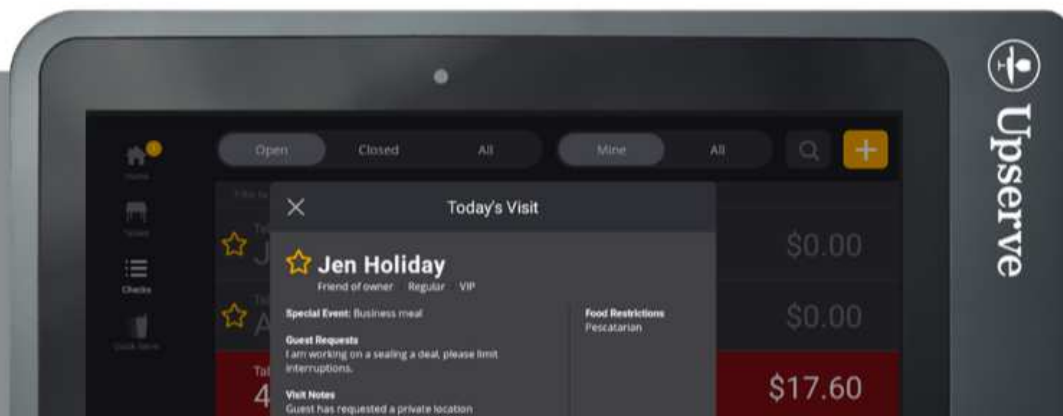

### Plan and prepare

As reservations come in, managers can review guest profiles and preferences to prepare for the night ahead. You might notice you have a high number of burger fans and margarita lovers so you can ensure the inventory is stocked and the bartenders are ready.

### Streamline your guest service

Once a course is sent, the hosts will receive an update so they can keep an eye on the progress of the diner's meal, providing a better idea of when the table will turn and the next group can be sat. Once checks are closed out, hosts are notified immediately so they don't have to communicate with servers or walk the floor.

This seamless integration allows servers to access vital information right on the POS, including insights into your guests' average turn times, dietary restrictions and reservation notes.
